

# Wireframing Process

1. **Requirement Gathering:** Sabse pehle project ki requirements samjho. Client ya stakeholders ke saath meeting mein ye confirm karo:
  - App/Website ka purpose kya hai?
  - Target audience kaun hai?
  - Features ki priority kya hai?
2. **User Flow Create Karna:** Ek flowchart banao jo user ke steps dikhaye. Example: Login -> Dashboard -> Profile -> Logout.
3. **Sketching:** Pehle paper par ya ek simple tool mein rough sketches banao. Yaha sirf layout ka idea banate hain.
4. **Wireframing Tools Ka Use:** Tools ka use karke detailed wireframes banao. Developers aur designers ke liye ye tools helpful hain:
  - **Figma:** Collaborative aur real-time editing ke liye perfect hai.
  - **Balsamiq:** Agar low-fidelity wireframes chahiye toh best.
  - **Adobe XD:** High-fidelity wireframes aur prototyping ke liye.
  - **Draw.io:** Simple user flows banane ke liye.

## Wireframe Components
