

Wireframing Developers Ke Liye Kyu Zaruri Hai?

1. **Clear Communication:** Jab designer aur developer ek hi page par hote hain, toh project smooth chalta hai. Wireframe se developer ko samajh aata hai ki kis screen par kya functionality implement karni hai.
2. **Logical Flow Samajhna:** Developers ko pata lagta hai ki user ka journey kaisa rahega, kaunse API calls honge, aur data flow kaisa hoga.
3. **Edge Cases Handle Karna:** Wireframes banate waqt hi edge cases ka discussion ho jata hai. For example, "Agar user password bhool jaye toh kya hoga?"
4. **Time & Cost Saving:** Wireframing ke bina directly coding shuru kar doge toh revision mein time barbaad hoga. Pehle structure clear hoga toh changes kam honge.
5. **Backend Development Alignment:** Backend logic ya database schema banate waqt wireframe ke reference se pata lagta hai ki kya-kya endpoints chahiye aur kaunsa data kaha dikhana hai.
