

Tips for Developers While Using Wireframes

1. **Functional Understanding:** Wireframe ko sirf ek drawing mat samjho; isme har element ki functionality hoti hai. For example, "Search bar" kaise kaam karega?
2. **Team Collaboration:** Designers aur project managers ke saath baithkar wireframe review karo aur queries raise karo.
3. **Version Control:** Wireframe ke different versions ko save karo. Figma ya Git-based repositories ka use karo.
4. **Annotations Samajhna:** Designers often annotations likhte hain wireframes mein. Ye samajhna zaruri hai taaki koi misunderstanding na ho.

Advanced Practices

- **Clickable Wireframes:** High-fidelity clickable wireframes banao taaki client ko prototype ka feel mile.
- **Dynamic Data Simulation:** Wireframe mein dummy data add karo jo backend integration ke liye reference ho.
- **Code Integration Mapping:** Wireframe ke hisaab se CSS/HTML classes aur React/Angular components ka naam plan karo.
